

HHS gave healthcare orgs an extra year on video accessibility.

The WCAG deadline moved to May 2027. An extra year is exactly enough time to build the pipeline.

**A 60 minute recording
becomes five captioned clips.
The audio never leaves your
laptop.**

Dashed boxes run on your own machine. New cost, zero.

STEP ONE · saywhat

Skim the hour in five minutes.

```
> python3 saywhat.py "https://www.youtube.com/watch?v=jNQXAC9IVRw"
"
All right, so here we are, in front of the elephants
the cool thing about these guys is that they have really...
really really long trunks
and that's cool
(baaaaaaaaaaaaahhh!!)
and that's pretty much all there is to say
>
```

Timestamped transcript, locally, with whisper. Find the 40 second moments worth keeping.

STEP TWO · cutshort

Cut those moments into shorts.

Captions burned in with word level timing. Title cards.
One JSON file describes the batch.

THE PART THAT MATTERS IN HEALTHCARE

A cloud vendor that touches a patient's voice becomes a business associate.

That means a BAA before the first byte goes up.

Local processing makes the whole question go away.

BY THE WAY

Captions are the floor.

WCAG puts captions on prerecorded video at Level A.

The AA deadline everyone is tracking assumes you already did this part.

What does your team do today with a recording that might have a patient's voice on it?
